Rosaria Santamaria has received a second fellowship by Prof. Donato Chiatante in the laboratory of Environmental and Applied Botany in the Department of Biotechnologies and Life Science, Insubria University. She has got a bachelor degree in Biological Sciences. Her activity concerns the use and management of a prototype of automated growth chamber for the monitored production of forest plants for the European project called Zephyr. The fellowship activity includes the integration of hardware and software of the prototype with different partners involved in the project, the morphological measurements of seedlings about experiments in the growth chamber and the coordination and support in educational activities at various levels of education (primary schools, secondary schools, universities). She speaks Italian as a native language and English as foreign language.
